

PHOTOSHOP

Project 3.4

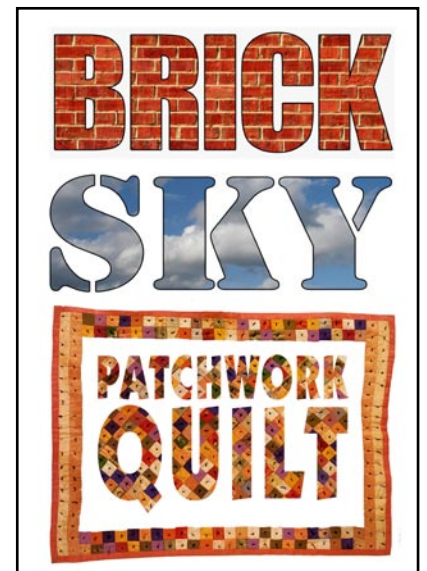

Name _____

Text Effects

1. Create an A4 document at 300ppi and place 3 separate text layers for 3 separate words. You could do "Photoshop Text Techniques". Move the layers until you have a pleasing look, remember the 4 basic design principles (C.R.A.P). Experiment with the Drop Shadow command in the Layer Styles window.

2. In a new document do the same with the Stroke command.
3. And the same for Bevel Emboss.
4. Create a 4th document, write some text in a heavy typeface, Impact for example. Place an appropriate image from the internet (make sure that it is large) into the text by placing the image above the text layer and applying a clipping mask (see example to the right).
5. On another A4 document write some text and convert the text layer to a shape layer. Now activate the anchor points and manipulate the text in an appropriate manner.

Objectives
Using Layer Styles
Applying appropriate techniques to text
Understanding typographic principles
Converting text to shape
Manipulating Text

Lecturer's Comment: _____
